TuitionPilot: project submission

2026 Shenzhen International FinTech Competition · International Track · Topic C (Cross-border & Student Finance) Team **TuitionPilot**: Chandan (lead), Nishanth · Source code: https://github.com/Timoerjoves/TutionPilot

> Synthetic data only. Payments run in a simulated bank; no real money moves. Not tax advice. Not RBI-approved.

TuitionPilot is an AI agent that helps an Indian family pay university tuition abroad: it verifies the university's signed invoice, works out the LRS limit, TCS and the real cost of each route, plans when to send, drafts the A2-style form, and pays inside a sandbox bank only after a parent's own device signs the exact plan.

Deliverables

#	Deliverable	Required	Files (click to open)
01	Technical documentation	Mandatory	TuitionPilot_01_Technical_Documentation.pdf
02	Presentation deck (designed for 10 minutes; 11 slides, about 9 minutes)	Mandatory	TuitionPilot_02_Presentation_Deck.pdf · TuitionPilot_02_Presentation_Deck.pptx
03	Demo video (up to 5 minutes)	Optional	Link to be added
04	Source code with README and GitHub link	Optional	Repository: https://github.com/Timoerjoves/TutionPilot · TuitionPilot_04_README.pdf · Download all code as ZIP
05	Security self-assessment report	Optional	TuitionPilot_05_Security_Self_Assessment.pdf
06	Execution evidence	Optional	TuitionPilot_06_Execution_Evidence_Summary.pdf · TuitionPilot_06_Execution_Evidence.zip (sandbox ledger, hash-chained audit log, what-the-model-saw log, scenario results)

Run it yourself (Python 3.10 or newer, nothing to install)

```
python -m app.server                                # then open http://127.0.0.1:8000, demo PIN 2468
python -m unittest discover -s tests -t .           # 271 tests
python -m scenarios.runner                          # 27 of 27 scenarios
python -m app.audit verify data/evidence/demo/audit_log.jsonl
```

At a glance

- 271 tests pass; 27 of 27 scripted scenarios pass; the attack lab stops 16 of 16 attacks; the demo audit chain verifies.

- Every number comes from tested code with a rule trace (rule id, pack version, effective date, source); 10 rules are verified against RBI and the Income-tax Act 2025, and the rest are flagged as unverified in every output.
- Permission tiers T0 to T4; a payment needs the parent's PIN and the parent device's Ed25519 signature over the plan hash.
